

	Page.
to those of Tropical Climates found in the Sussex Beds....Supposed Appearance of the Country when these Animals flourished....Petworth Limestone....Hastings Sand and Weald Clay....The Wealden Beds formerly furnished the greatest Part of the Iron manufactured in England....Mr. Mantell's Enumeration of the Species of Terrestrial and Freshwater Fossil Remains in the Wealden Beds.Observations on the Wealden Beds, and the Change from Marine to Freshwater Formations, - - - - -	191

CHAPTER XIV.

ON CHALK, AND THE SUBJACENT BEDS OF GREEN SAND.

Extent of the Chalk Formation....Green Sand divided into lower and upper Green Sand by a Bed of Clay called Gault ...Chalk Marl....Chalk; its Mineral Characters....Change of Character in the Alps....Flints in the upper Chalk.... On the Formation of Flints....Remarkable Organic Remains in Chalk....Recent Discovery of Beds belonging to the Chalk Formation, in the United States of America....On the Scaglia of the Alps supposed to represent Chalk, -	200
---	-----

CHAPTER XV.

ON THE FORMATION OF SECONDARY LIMESTONE AND SANDSTONE, AND ON THE PROGRESSIVE DEVELOPEMENT OF ORGANIC LIFE.

On the Deposition of Chalk....Whether formed by Animal Secretion, or by Eruptions of Water holding calcareous Earth in Suspension or Solution....Mud Volcanoes....Animal Bodies suddenly encased in Chalk indicate the Time required to form a Stratum of a given Thickness....Oolite and Encrinal Limestone partly formed by Animal Secretion....Formation of Sandstone....Repeated Appearance of dry Land during the Epoch when the Secondary Strata were deposited....Progressive Developement of Organic Life in the Secondary and Tertiary Epochs....Disappearance of enormous Reptiles and chambered Shells from the Seas of Northern Latitudes....Probability of the Ichthyosaurus existing as a living Species in the present Seas, - - - - -	206
---	-----

CHAPTER XVI.

ON THE LOWER OR MORE ANCIENT TERTIARY STRATA.

Formation of Tertiary Strata in Lakes or Inland Seas....Lakes of North America....Falls of Niagara....Alternations of Marine and Freshwater Strata.... Arrangement of the Tertiary Strata in the Paris Basin....Plastic Clay and London Clay....Geology of the lower Vale of the Thames....Remains of Crocodiles and the Nautilus in London Clay....Molasse of Alpnach in Switzerland, with Coal and Teeth of the Mastodon.... <i>Calcaire Grossier</i> , or Coarse Limestone of the Paris Basin, supposed to be of the same Age as the London Clay.... <i>Calcaire Siliceux</i>Gypsum and Gypseous Marl of the Paris Basin, containing Bones of numerous extinct Species of Land Quadrupeds....Remarks on their Discovery and Organization by Baron Cuvier....Marine Sandstone....Millstone. ... Upper Freshwater Formation....Tertiary Strata in the Isle of Wight....Crag of Norfolk,....its true Geological Position not determined....Cliffs of Brighton, -	215
---	-----

CHAPTER XVII.

ON THE RECENT TERTIARY STRATA, OR WHAT ARE CALLED BY SOME GEOLOGISTS QUATERNARY.

The Methods for determining the relative Age of Formations explained, and their Value examined... Evidence from Position....Evidence from Organic Remains....System of M. Deshayes founded on Fossil Shells....Uncertainty attending the Evidence from Organic Remains....Arbitrary Classifications of Naturalists....Supposed Limits to the Transmutation of Species of Molluscous Animals examined....System of M. Elie de Beaumont....Geological Age of Palæo-
