where it is impossible to lie during the prevalence of southwest gales, as vessels are then exposed both to the sea and wind.

The party who landed, and the schooner, arrived about the same time at Lahaina, where our gentlemen were very kindly received by the king and missionaries. They forthwith made preparations for a tour to East Maui. The Rev. Mr. Andrews, his son, and four students of the seminary, joined the party, together with six Kanakas to carry their food. The Kanakas were engaged at twenty-five cents a day, and twenty-five cents more was allowed for their food. The party first passed to Wailuku, where it was further increased by the accession of Mr. Baily.

In the evening they reached the sugar plantation of Messrs. Lane and Minor, which they found one thousand six hundred and ninetytwo feet above the level of the sea. These are two very respectable white men, who have married native wives. They are natives of Boston, and have brought their Yankee enterprise with them. Here all the party were kindly received. The plantation of these gentlemen is of some extent, and although the cane grows more slowly here, it makes better sugar than that on the low grounds, which is said to be owing to the former not blossoming. The houses are partly of native construction, and seem well adapted for their uses. The sugar-mill is one of the largest on the island.

Crops of Irish potatoes are very productive here; and corn is abundant a thousand feet higher up the mountain.

The next day, the party set out at an early hour, in hopes of reaching the summit, but it began to rain violently, in consequence of which they took shelter in a large cave, at an altitude of eight thousand and ninety feet. Here many interesting plants were found, among which were two species of Pelargonium, one with dark crimson, the other with lilac flowers; the Argyroziphium began to disappear as they ascended, and its place was taken up by the silky species, which is only found at high altitudes. From the cave to the summit they found shrubby plants, consisting of Epacris, Vaccinium, Edwardsia, Compositæ, and various rubiaceous plants.

On their arrival at the edge of the crater, on the summit, the clouds were driving with great velocity through it, and completely concealed its extent. The height, as ascertained by the barometer, was ten thousand two hundred feet. The driving of the sleet before the strong gale soon affected the missionaries and native students, the latter of whom for the first time, felt the effects of cold. The limit-line of woods was ascertained to be at six thousand five hundred feet.
