The fundamental idea of the classification of Fitzinger is the same as that upon which Oken has based his system. The higher divisions, called by him provinces, grades, and cycles, as well as the classes and orders, are considered as representing either some combination of different systems of organs, or some particular system of organs, or some special organ. His two highest groups (provinces) are the Evertebrata and Vertebrata. The Evertebrata represent the systems of the vegetative organs, and the Vertebrata those of the animal organs, as the Gut,
