

PLATE XXIV.

- | | Page |
|---|------|
| Fig. 1. <i>MESONACIS VERMONTANA</i> | 158 |
| <p>1. Copy of the original figure of the type specimen of the species. Collection American Museum of Natural History, New York City.</p> <p>1a. A very perfect specimen from the collection of Mr. E. Hurlburt. The matrix is in the U. S. National Museum collection.</p> <p>1b. Enlargement of the posterior portion of 1a. The spine projecting from the fifteenth segment is flattened down on the thorax more than is shown in the figure.</p> | |
| Fig. 2. <i>PARADOXIDES RUGULOSUS</i> | 162 |
| <p>2. Pygidium and four posterior thoracic segments, enlarged after Barrande (Syst. Sil. Bohême, vol. i, pl. ix, fig. 31, 1852), which is introduced for comparison with fig. 1b.</p> | |
