these the sense of touch is alone common to all animals; and is so generally diffused over the whole body, that it is not said to reside in any specific part. All animals do not possess all the senses; some possess only a part of them. But no animal is without the fifth sense, that of touch.

All animals which draw in and breathe out the air have lungs. Those animals which employ water, analogously to air, in respiration, have gills.

Le sens extérieur le plus général est le toucher ; son siège est à la peau, membrane enveloppant le corps entier. p. 36. Beaucoup d'animaux manquent d'oreilles et de narines ; plusieurs d'yeux ; il y en a qui sont réduits au toucher, lequel ne manque jamais. p. 37.

When the element subservient to the process of respiration is the air, the organ of respiration is the lungs : when water, the gills.

Quand cet élément est de l'air, la surface est creuse, et se nomme *poumon*; quand c'est de l'eau, elle est saillante, et s'appelle *branchie*. p. 43.
